ASP is on a journey to change and improve students' learning and, even more essentially, their experience of learning. Through gamification, we teach subjects, not through lectures and tests, but through playing games.

Imagine learning your school subjects through playing games with your friends rather than by listening to lectures and taking tests and being guided in this learning by Communicators chosen for their ability to engage students who are backed up by subject experts who keep the curriculum fresh, up-to-date and properly structured.

And not only does ASP teach in ways that are specifically designed to engage students, ASP takes the best of curriculum and adds and blends so that so that we are giving the most relevant education possible for students who will be entering a vastly new 21st Century workplace. Beyond teaching school knowledge, ASP is designed to build up students as real-world problem solvers and lateral thinkers who will have project and leadership skills sought after by today and tomorrow's biggest, cutting edge, fasting moving and fastest growing companies and organizations.

For example, in some of ASP's classes students will learn to make their own educational board games. From game concept, to adding the education elements to the game, to the technical skills needed to create a board game, to problem solving skills of keeping the game exciting while also providing important learning. ASP doesn't produce worker drones, we produce thinkers with initiative and perseverance.

And perhaps best of all, ASP is an Afterschool program*. So you don't have to worry about your child losing the expected benefits of the regular education system to avail yourself of ASP special benefits. You get to have both and can have your child's experience with ASP grow as ASP grows.

ASP: Preparing today's children for tomorrow's world.

*For any families interested, ASP can also serve as a fulltime school for families who embrace ASP's vision and/or feel their children are being failed by traditional schools.
